

In a document file (.doc, .docx, .pdf, etc.), summarize your findings:

1. Executive Summary: What are your main findings and recommendations, in a single paragraph?
2. Summarize the results of your initial analyses of overall giving and giving to UVA (1-3 paragraphs).
3. Describe a strategy for finding new potential sources of money for UVA. What countries or institutions should UVA target, and why? (1-3 paragraphs)
4. Conclude with a summary of UVA's prospects for increasing foreign giving. (1 paragraph).

1. Main Findings

Our main findings show that **Carnegie Mellon University (CMU)** receives the largest total amount of foreign funding, while **UCLA** receives foreign gifts most frequently. **Qatar** is the country that provides the largest total amount of foreign funding. We also found that the mean and median gift amounts are substantially different. This difference is likely driven by a small number of universities receiving extremely large amounts of funding, which increases the mean and pulls it away from the median. We also found that universities receiving large amounts of foreign funding appear to have significant funding related to research. Based on this finding, we recommend that UVA continue to strengthen its efforts to attract foreign funding for research.

2. UVA Compared with the Overall Market

The overall average amount of foreign funding received by universities in the dataset is approximately **\$52.2 million**, while UVA receives an average of approximately **\$226,421** per gift. This indicates that the average gift amount in the overall market is substantially higher than UVA's average gift amount. This difference suggests that UVA has an opportunity to increase both the size and number of its foreign funding relationships.

3. Opportunities for UVA

From our analysis, we found that UVA receives funding primarily through **contracts and monetary gifts**, with no identified foreign real-estate gifts. This may represent an area that UVA could explore further. We initially hypothesized that universities receiving the most foreign funding were primarily targeting a small number of wealthy countries and receiving very large amounts from each country. However, our analysis suggests that the **number of**

countries is also an important factor. The top five fund-receiving universities have relationships with approximately **30–59 countries**, while UVA has relationships with only **15 countries**. Therefore, UVA could increase its foreign funding opportunities by developing strategic relationships with additional countries and expanding its international network.

4. Recommendations

1. Based on our analysis, we recommend that UVA:
2. **Explore opportunities for foreign real-estate funding** as a potential area for diversification.
3. **Build strategic relationships with more countries** to expand UVA's international funding network.
4. **Strengthen research-related fundraising efforts**, particularly by studying the strategies used by universities that receive large amounts of foreign funding.
5. **Study successful peer institutions**, such as CMU and UCLA, to identify countries, giftors, and gift types that could represent potential opportunities for UVA.
